

Project Report – Healthcare Booking App

Project Title

HealthConnect – Healthcare Booking Application UI/UX Design Using Figma

1. Introduction

HealthConnect is a healthcare booking mobile application designed to help users search for doctors, view doctor information, and book appointments digitally. The system provides a simple and organized platform where patients can access healthcare services quickly and conveniently.

This project focuses on creating a multimedia user interface using Figma. The design includes multiple interactive screens with proper navigation, visual consistency, multimedia elements, and usability principles. The main objective of the system is to improve the appointment booking process by reducing the difficulty of finding doctors and scheduling appointments.

The application combines UI/UX principles with multimedia elements such as icons, images, typography, color schemes, and interactive transitions to provide an effective user experience.

2. Objective

The main objectives of this project are:

- To create a modern and user-friendly healthcare application interface.
- To simplify doctor appointment booking.
- To provide easy navigation between different screens.
- To maintain visual consistency using proper color schemes and layouts.
- To improve accessibility and usability for users.
- To demonstrate multimedia integration using Figma design components.

3. Target Users

The healthcare booking application is intended for the following users:

- **Patients:** People who need to book doctor appointments quickly and efficiently.
- **Working Individuals:** Users with busy schedules who prefer digital appointment booking instead of visiting hospitals physically.

- **Elderly Users:** People who require a simple and organized interface to access healthcare services.
- **Urban Smartphone Users:** Users comfortable with mobile applications and digital healthcare services.

4. Design Elements Used

The interface design uses several multimedia and UI elements to improve usability and visual appeal.

Color Scheme

A healthcare-based color palette was selected to create trust and comfort.

- **Primary Blue:** Represents trust, professionalism, and healthcare.
- **White Background:** Creates cleanliness and readability.
- **Light Gray Sections:** Used to separate content.
- **Green Accent:** Used for confirmation and success actions.

Typography

Simple and readable typography was used to improve readability.

- **Heading Font:** Bold and clean style
- **Body Font:** Simple and minimal
- **Consistent font sizes** for hierarchy

Multimedia Elements

The project includes:

- Doctor images
- Medical icons
- Search bar icons
- Interactive buttons
- Rounded cards and shadows

5. Description of Interfaces

The application includes five major screens.

a. Login / Sign In Screen

This screen allows users to log into the healthcare application using their credentials.

Features:

- App logo
- Email or phone input field
- Password field
- Login button
- Signup option

Purpose: This screen provides secure access to the application.

b. Home Screen

The home screen acts as the dashboard of the application.

Features:

- Search bar for doctors
- Doctor categories
- Popular doctor cards
- Doctor images, names, and specialties

Purpose: Allows users to browse available doctors and search for specialists.

c. Doctor Detail Screen

This screen appears after selecting a doctor from the home screen.

Features:

- Doctor profile image
- Doctor name and specialty
- Experience and rating
- About doctor section
- Schedule Appointment button

Purpose: Provides detailed information about the selected doctor.

d. Appointment Booking Screen

This screen allows users to choose an appointment date and time.

Features:

- Calendar selection
- Time slot options
- Confirm appointment button

Purpose: Allows users to book appointments conveniently.

e. Confirmation Screen

This screen appears after a successful booking.

Features:

- Confirmation message
- Appointment details
- Return to home button

Purpose: Confirms successful booking and provides appointment information.

6. Screenshots of Designed Interfaces

1. Login Screen

Description:

This screen allows users to log into the HealthConnect application using email or password credentials. It includes input fields, a login button, and a signup option.

2. Home Screen

Description:

The home screen displays a search bar, doctor categories, and featured doctor cards. Users can browse doctors and select one to view details.

3. Doctor Detail Screen

Description:

This screen provides detailed information about the selected doctor including experience, specialty, and appointment scheduling option.

4. Appointment Booking Screen

Description:

Users can select available dates and time slots to schedule appointments.

5. Confirmation Screen

Description:

This screen confirms that the appointment has been booked successfully.

7. Prototype Interaction

The prototype was created using Figma's prototyping tools.

Navigation Flow

1. Login Screen → Home Screen
2. Home Screen → Doctor Detail Screen
3. Doctor Detail Screen → Appointment Booking Screen
4. Appointment Booking Screen → Confirmation Screen
5. Confirmation Screen → Home Screen

Prototype Features

- Button click interactions
- Screen transitions
- Connected navigation flow
- Interactive user journey simulation

The prototype creates a realistic application experience by allowing users to navigate through the booking process.

8. Conclusion

The HealthConnect healthcare booking application was designed to provide a simple and organized healthcare appointment system. The project successfully demonstrates multimedia UI design principles using Figma.

The application includes multiple screens, consistent layout design, visual hierarchy, multimedia integration, and interactive navigation. The design follows good usability practices while maintaining an attractive and professional appearance.

This project helped improve understanding of UI/UX principles, Figma prototyping, multimedia design components, and interactive application flow.
